

Project 2 Summary

Mohammad Amin Johari

During Phase Two of the project, I contributed to the pytest repository by addressing Issue #12979. This issue involved adding Sphinx-compatible docstrings and inline comments to improve the documentation and readability of the code within the file `pytest/_src/pytest` (lines 494–542). My contributions included analyzing the code to understand its functionality, writing detailed docstrings for functions and classes according to Sphinx standards, and adding inline comments to clarify complex parts of the code.

To ensure quality, I executed the project's tests using `tox`, resolved a changelog issue by creating the required documentation file, and submitted my changes as a Pull Request. After addressing feedback from maintainers, my pull request was successfully merged into the repository, enhancing the code's maintainability and accessibility. This project provided valuable experience in Git, GitHub workflows, and open-source contributions.
